Welcome

Thanks for using **EaseUS Todo PCTrans**. Usually, a new computer (PC) comes with faster processing, more memory, and enhanced graphics. After purchasing a new PC, one of the most daunting tasks is to figure out how to transfer the accounts, settings, programs, and data from the old PC to a new one and maintain routine jobs as usual.

Todo PCTrans is born to make the migration process easier for you. This powerful and cost-effective application is able to move all of your selected accounts, settings, applications, files, and folders between 2 computers in an easy and simple way, and it is also able to transfer programs and data from a smaller partition to a larger one for releasing space within a computer.

Todo PCTrans transfers your PC through the network connection (local area) or compressed image file, and both source and target computer require a client of Todo PCTrans installed. It is worth mentioning that the two computers can also be directly connected via an ethernet crossover cable when using the network connection method.

Glossary

Old PC/Source PC

The source PC is the "old" PC that contains the accounts, applications, files, and settings that you wish to move to the destination "new" PC.

New PC/Destination PC

The "new" PC is the PC to which the accounts, applications, files, and settings are moved.

Transfer

The process of copying all of your selected accounts, applications, files, and settings from your "old" PC to your "new" PC.

Pre-Transfer Checklist

- 1. System Requirements
- Windows XP 32bit
 - Windows Vista 32bit/64bit

- Windows 7 32bit/64bit
- • Windows 8/8.1 32bit/64bit
- Windows 10 32bit/64bit
- Windows 11 32bit/64bit
- Windows Server 2003/2008/2012/2016/2019

2. Operating System on the new PC must be equal or newer than the source PC. For example, the data and applications cannot be moved from Windows 7 to XP via the network connection transfer method.

3. Todo PCTrans has been installed on both PCs.

Also, pay attention to the next two if you are transferring via LAN.

4. Keep network connection stable and unobstructed while transferring.

5. Disable anti-virus programs and firewall on source and target computer to ensure successful connection.

Activation

Different versions of EaseUS Todo PCTrans

Free version

- • Software title reads EaseUS Todo PCTrans Free
- Allow users to transfer no more than 2 programs and 500MB files, disk junk cleanup no more than 500 MB files

Trial version

- • Software title reads EaseUS Todo PCTrans Trial
- Allow users to view which programs, data, and the user account can be transferred, but it is not allowed to do a real transfer without a license code

How to activate

To enjoy all features on business use, please simply click **Upgrade to Full Version** to open the window for purchasing or entering the license code. You can also see the edition difference of Todo PCTrans.

EaseUS Todo PCTrans Free			o Full Version 💽 💷	\times

	You can directly transfer data from old PC to new PC if two PCs are connected o LAN. Supported data ①	n the same
🥌 Product Key		
	Start	

PC to PC is able to transfer applications, data, accounts, and settings between two network-connected PCs.

Backup & Restore prepares an image file to include applications, data, accounts, and settings in advance, then transfer from the image to the target PC. It transfers between two PCs or on the same PC after reinstalling the system. This method can also be used to back up your programs, data, and accounts.

App Migration only transfers applications from one to another partition on the internal hard disk.

Data Rescue is able to migrate the content from the old PC that failed to work properly, by connecting the disk of the old computer to the new computer.

PC to PC

Connect source and target PC

1. Launch Todo PCTrans and select **PC to PC**. The **IP address** information on the current PC will be stated at the bottom.

2. Click **PC to PC** button and get the window to choose the current PC as the new PC(target)or the old PC(source). Target PC is the PC you want to transfer the applications and files to, while the Source PC is the PC you want to transfer the applications from.

3. After you select your drive, the product will scan all the computers in the same network and list them on the left panel. Select a computer according to the username (Windows account) and IP address, then input the password of the account on that computer and select the transfer direction to connect the two computers. If you do not have a password for that account, leave it blank and directly click **Connect**.

Note:

The password of the account on the destination PC is the same as the one on the source PC after transferring.

Start the transfer

After completing all the settings above, please click the **Transfer** button to start.

Note:

When the transfer is finished, a reboot is required to refresh all transferred information.

The **Migrate Logs** can be seen on the main window for checking the trasnferred result after using **PC to PC** method.

Backup & Restore

Data Backup

1. Launch Todo PCTrans, select **Backup & Restore** at the home page of EaseUS Todo PCTrans, then click the **Start**.

2. Select the **Data Backup** method and click the **Next**.

3. Confirm the image name and path for saving images.

4. Todo PCTrans will start enumerating all the applications and data that can be transferred. This process will take a while and the speed varies due to the amount of data and performance of the computer. Once the program finishes counting, you can see the size of Applications, Accounts, and Files.

Cleanup

Cleanup is the tool to keep your system clean and fast. It helps you clean up system disks, free up disk space, and delete useless large files. It includes System Cleanup and Large File Cleanup functions.

System Cleanup

System Cleanup cleans junk files from System, Browser, Windows Built-in Applications, and Other Applications, it will save disk space and improve your computer performance.

1. Scan your C partition after running the System Cleanup function.

The scanning may need a long time if you have lots of junk files. Please wait patiently.

2. Check all listed junk files to manually select them or select them by default option.

← Back					• – ×
	Details			×

3. Click the **Clean up** button to delete your selected junk files.

Cleanup Completed window appears once it is finished.

Large File Cleanup

If the capacity of your hard drive is running low, it is time to clean off some files. A good place to start is by locating the largest files on your hard drive. Large File Cleanup can locate these files and easily remove them from your hard drive.

There are two options in this function: Large files and Folders

Large files: Move or delete large files from the selected partition(s).

Folders: Migrate personal folders (Such as Desktop, Downloads, Documents, etc) to another location to save disk space.

Note:

Please do not delete the files from the installation directory of your programs, otherwise, it may cause the program cannot be used.

App Management

This feature is used to uninstall programs, repair the damaged programs, or delete the program registry information from your computer.

There are three operation options for your selected programs:

Uninstall: Uninstall the selected program from your computer.

Repair: Fix your programs to make it work normally.

Delete: Delete the registry key of the selected program but still keep the program files in the installation directory.

Protection

Protection is the tool to keep your useful information. It only includes the Product Key function now.

Product Key

This feature is used for saving activation/license keys of your system and applications to avoid losing them in case of system reinstallation, crash, etc.

1. Click the **Scan** to scan the license key of your Operating System and Applications.

2. **Save** your keys to a *.txt file or directly copy the key.
